

Cut Down on Data Entry. Process Invoices Faster.

Announcing Invoice AI. Now Available.

Invoice AI helps your team reduce workload and manual effort by automatically extracting key header fields — like invoice number, date, and subtotal — from supplier-submitted PDFs.

Embedded directly in your existing Unimarket workflow, **Invoice AI speeds up invoice processing**, flags duplicates before they're entered, and helps your AP team stay efficient — even as demands increase and resources remain tight.

Because in today's resource-constrained environment, doing more with less isn't optional — it's essential.

The image features a man with glasses and a beard, smiling, positioned in the center. Surrounding him are several floating UI elements representing the Unimarket Invoice AI interface:

- Supplier Search:** A search bar with the text "Supplier" and a magnifying glass icon, followed by "Cape Electric Supply" and a close button.
- Invoice Number:** A text field containing "8675962.22".
- Invoice Date:** A date picker showing "9/9/2025".
- Invoice List:** A table with columns for invoice details, including invoice number, date, and amount.
- Invoice Preview:** A detailed view of an invoice from "Cape Electric Supply" with invoice number "8675962.22" and date "9/9/2025".

Invoice AI

Extract Header Data Automatically

Invoice AI reads incoming PDF invoices and pulls key header fields — invoice number, date, PO number, and subtotal — directly into the Unimarket invoice screen. Less typing. Fewer mistakes. Faster processing.

Improve Accuracy and Compliance

Reduce the risk of manual errors and improve confidence in your financial data. Invoice AI supports cleaner audit trails and more consistent invoice handling across your institution.

Prevent Duplicate Payments

Identify previously processed invoices automatically to avoid accidental duplicates. Protect your institution from overpayment risk and maintain clean, auditable financial records.

Enhance Visibility — No New Systems

Invoice AI lives inside your existing Unimarket workflow — no extra apps or logins. Just smarter processing, embedded where your AP team already works.

Speed Up AP Workflows

With header data pre-filled, your team can move faster through the AP inbox — cutting down on repetitive tasks, accelerating invoice approvals, and increasing throughput across finance.

Do More with Less

When resources are tight and workloads are growing, Invoice AI helps your AP team stay productive — reducing manual effort, lightening the operational burden, and enabling sustainable scale.
